

## Draft Giant Crab Harvest Strategy Consultation

Anthony Ciconte

7/04/2025

There is still some ambiguity in the wording of the TABLE 1.

Key Harvest Control Rule elements	Cap: 10.5t	Cap: 10.5t below target reference point. No cap above target reference point.	Cap: 10.5t below target reference point. No cap above target reference point.
	<p><b>Increase:</b> No available.</p> <p><b>Decrease:</b> Up to 50% if CPUE is below threshold reference point  50-100% if CPUE is below the limit reference point</p>	<p><b>Increase:</b> Up to 20% every 3 years if the CPUE is above the target reference point.</p> <p><b>Decrease:</b> As per level 1</p>	<p><b>Increase and decrease:</b> TACCs will be set according to the model to ensure the Fishery fluctuates around the target reference point and remains above the limit reference point with a 90% probability.</p>

Increase: No Available is not correct. The TAC can still go to 10.5t.

I think the wording should be "Up to a total of 10.5t and no increase over 10.5t"
